

#### Services and support

Companies that depend on Ubuntu for infrastructure choose the Ubuntu Advantage service from Canonical. Ubuntu Advantage includes management tools for large numbers of Ubuntu machines, dedicated support and expert advice to help you make the most of Ubuntu. Learn more at [www.ubuntu.com/business](http://www.ubuntu.com/business)

#### System requirements

Your server must have at least 128 MB of RAM and 1 GB of disk space. This 64-bit edition will run on AMD64 and Intel x64-based computers. A 32-bit version of Ubuntu Server can be downloaded from [www.ubuntu.com](http://www.ubuntu.com)

#### Share Ubuntu, it's legal

'Ubuntu' is an ancient African word which means 'a shared humanity'. All of the software on this CD is legal to copy and share. If you know someone who would enjoy Ubuntu, please pass it on. That's the spirit of free and open-source software!

This CD includes software released for free public use under several licences. It is provided without warranty, even the implied warranty of merchantability, satisfaction or fitness for a particular use. See the licence included with each program for details. Ubuntu, the Ubuntu logo and Canonical are trademarks of Canonical Ltd. All other trademarks are the property of their respective owners.

#### What is Ubuntu Server?

This is the lean server and cloud version of Ubuntu, the world's favourite free operating system. Ubuntu has been adopted as a trusted server platform by large and small organisations alike. It powers some of the world's biggest websites, and it's the most popular OS for cloud deployments everywhere. Whether you're deploying a fanless home server or a fifty-thousand node rendering cluster, you're in good company with Ubuntu. It's easy to install, maintain and includes free security updates.

#### Metal as a Service

Ubuntu comes with the world's largest selection of pre-packaged server software, so you can deploy web, email, file and database servers with ease. The new Metal as a Service (MAAS) deployment system brings cloud semantics to the bare metal – deploy complex systems easily onto your server clusters, scale them up and down and connect them to the cloud, all through a web interface.

#### Ubuntu Cloud

This CD has everything you need to build an Ubuntu cloud infrastructure with OpenStack. There's no better way to get up and running with the cloud. And with Juju, you can deploy, scale and re-use cloud services, easily. Learn more at [juju.ubuntu.com](http://juju.ubuntu.com)

Canonical helps many of the world's best-known organisations make the most of their Ubuntu deployments. We offer consulting, training and support services, plus systems management tools that handle individual servers, desktops and cloud deployments. Visit [www.ubuntu.com](http://www.ubuntu.com) and [www.canonical.com](http://www.canonical.com) to learn more.

## Server 12.04 LTS
