Installing Ubuntu Server

Just boot your server from this CD. Please follow the instructions carefully during installation. If you have more detailed requirements than the defaults, such as assigning a static IP address, select 'go back' for more options. During installation, you will be able to specify usage of LVM, RAID or iSCSI volumes.

Full documentation is available online at help.ubuntu.com. More information about Ubuntu Server is available at www.ubuntu.com/server.

Why choose Ubuntu Server?

- Ubuntu Server is used daily by organisations around the world
- Ubuntu Server is the most popular operating system in large public cloud infrastructures
- Ubuntu Server is freely available to all users, with free, regular security and maintenance updates
- Businesses make substantial cost savings by running their common workloads, like web servers and file servers, on Ubuntu
- Ubuntu Server works with all the most popular server hardware from the world's leading manufacturers
- You can call on Canonical to help deploy, install, manage and support your Ubuntu infrastructure
