Open source is a development method for software that harnesses the power of distributed peer review and transparency of process. The promise of open source is better quality, higher reliability, more flexibility, lower cost, and an end to predatory vendor lock-in.

The Open Source Initiative (OSI) is a non-profit corporation formed to educate about and advocate for the benefits of open source and to build bridges among different constituencies in the open-source community.

One of our most important activities is as a standards body, maintaining the Open Source Definition for the good of the community. The OSI Certified Open Source Software certification mark and program creates a nexus of trust around which developers, users, corporations and governments can organize open-source cooperation.

Qu'est-ce que c'est logiciel libre?

L'expression «Logiciel libre» fait référence à la liberté et non pas au prix.

Pour comprendre le concept, vous devez penser à la «liberté d'expression», pas à «l'entrée libre» (*Richard Stallman*).

Qu'est-ce que c'est logiciel libre?

Richard Stallman

1. la liberté d'exécuter le programme, pour tous les usages
2. la liberté d'étudier le fonctionnement du programme
3. la liberté de redistribuer des copies
4. la liberté d'améliorer le programme et de publier ses améliorations
